

ABSTRACT OF THE DISCLOSURE

A medicine feeder is composed of: a cassette (2) for housing medicines D in an array; a biasing member (6) for biasing the medicines D in the cassette (2) toward one end
5 side; and a discharge member (16) disposed on one end portion of the cassette (2) for holding a medicine D in a holding recess portion (18) and discharging the medicines D one at a time by rotating the discharge member. This makes it possible to ensure the discharge of a prescribed quantity of
10 medicines based on prescription data.
